Historical Context: An early generalist scholar from the 19th century, who was not a specialist in any one field, but who was interested in all things, was a common sight. This was a time when the world was still largely unknown, and people were curious about everything. This curiosity led to a generalist approach to learning, where people would study a wide range of subjects, from science to literature, from history to art. This approach was often criticized as being too broad and shallow, but it was also praised for its breadth and depth. The generalist approach was a reflection of the time, and it was a way of trying to understand the world as a whole. It was a time when people were still trying to figure out what was out there, and they were doing it in a very general way. This was a time of great discovery, and it was a time when people were trying to understand the world in a very general way.
